

WHY WE CRATE

During the survey of your goods, a Daryl Flood Consultant may identify a number of items that require additional protection while in transit. Proper packing could be the most important service we provide. Although we are experts, you may have items that would be best transported in custom wooden crates.

How Crating Works

Daryl Flood's preferred providers come to your home, prior to loading, and take exact measurements of items needing custom crating service.

The provider may pre-build the custom crates or arrive prepared to construct them onsite.

Daryl Flood will coordinate to have this same company perform uncrating services at destination.

What Items Need Crating?

Extremely delicate/fragile items

Example: Oil paintings, delicate art frames

High Value pieces that will not fit in standard cardboard boxes

Example: Large glass or ornate table tops, chandeliers

Priceless family heirlooms that can't be replaced

Example: Antiques, original artwork

Important to Remember:

Our competitors do not always include crating in their original estimate and as a result their estimate may be much lower. Be sure to compare estimates.
